

Call for applications to

EMTRAIN PhD Workshop 2012

February 23-26, Manchester, UK.

The European Medicines Research Training Network (EMTRAIN) is a network within the Innovative Medicines Initiative (IMI) with the task of establishing a sustainable, pan-European platform for education and training (E&T) covering the whole life cycle of medicines research, from basic science through clinical development to pharmacovigilance.

EMTRAIN has developed a framework for joint PhD programs with the aim to contribute to knowledge exchange, networking, mobility between industry and academia and establishment of a cohort of industry-aware scientists.

Applications for participation in the 2012 EMTRAIN PhD workshop is now open!

An important part of the EMTRAIN work is to host the yearly EMTRAIN PhD workshop. The workshop will be a forum for Public-Private Partnership (PPP) PhD-students to share experience, network and grow into their role as industry-aware scientist. The program will include scientific lectures, interactive seminars, oral presentations from the students and round table discussions with the faculty.

This year's location is at AstraZeneca, Alderley Park, Manchester, UK. All costs for travel and accommodation for participating PhD students and postdoctoral fellows will be covered by EMTRAIN. The number of participants will be limited to 25 people.

Eligible to apply are all students and postdoctoral fellows working within a research project at a European university or medical company. We especially welcome early stage PhD-students in PPP programs or IMI supported projects and postdoctoral fellows with experience of PPP programs.

Application should be made on the EMTRAIN PhD workshop application form. Applications should be sent to Lena.Scott@ki.se no later than November 25th 2011.

Deadline November 25th 2011!
